

<p><b>CONCENTRATED INHIBITOR FOR MINERAL SALT FORMATION</b></p>	<p><b>Item no.:</b> <b>00 02 85</b></p>
<p><b>Areas of application</b></p>	<p>Concentrated agent used to prevent nucleation on bottles and avoid the „dull bottle effect’ when the machine was stopped.</p> <p><b>Concentrated Inhibitor for Mineral Salt Formation</b> extends the life cycle of alkaline bathes and prevents the precipitation of calcium and magnesium ions in case of extremely high water hardness.</p> <p>When the product is used in bottle washing machines the concentrate is given into the last station with alkaline solution in order to increase cleansing efficiency and achieve a more brilliant shine on the bottles.</p>
<p><b>Method of application</b></p>	<p><b>Add the product with an automatic dosing system (time relay, volumetric control) into the last alkaline bath:</b></p> <p>Concentration: 0.2 – 0.4 % (depending on the hardness of water)          Temperature: 60 – 90°C          Time: 15 – 30 minutes</p> <p>After having used the product rinse thoroughly with drinking water to remove any possible residues!</p>
<p><b>Material compatibility</b></p>	<p>PVDF, PP, PE, PVC, Stainless Steel, Glass, Steel, Cast Iron</p> <p><b>Concentrated Inhibitor for Mineral Salt Formation</b> must not be used on aluminium.</p> <p>In addition, further material incompatibilities cannot be excluded. Therefore, test the product on an unimportant spot before its definite use.</p>
